

ACCESS **MORE DATA**
 PRESERVE **PRIVACY**
 GAIN **INSIGHT FASTER**
 WITHOUT MOVING DATA

PROBLEM

Data is the fuel that powers AI. Unfortunately, according to Forrester, 60-73% of all enterprise data goes unused for analytics. Much of that is due to the unstructured and decentralized nature of data today. Valuable data is distributed across different data silos, departments, systems, and jurisdictions making it nearly impossible to derive value using the typical centralized approach to AI and data science projects.

SOLUTION

Devron's federated data science platform enables data science teams to build & train models on distributed data without the cost & risk of centralization. It brings analytics to the data instead of data to the analytics—training algorithms where the data resides. As a result, you can accelerate your time to value, unlock trapped insights, and realize better business outcomes.

"Devron allows us to accelerate AI projects and delivery of business value. By allowing access to more information faster and with less risk of data exposure, we can deliver better business decisions, greater efficiencies, and more competitive strategies."

IAN PEBLES | Head of Business Development, Publicis Sapient AI Labs

Best AI Solution for Big Data

DEVRON BENEFITS

Gain better insight faster, by boosting model accuracy, generalizability, & reliability

Reduce overhead of data movement, duplicate infrastructure, ETL pipelines

Integrate using traditional data science workflows

Unlock access to valuable, previously inaccessible datasets (PII/PHI, data sovereignty, M&A)

Preserve data privacy, analyzing data where it resides and without privacy leakage or lineage issues

Stay compliant & secure—only share model learnings, not the data
